# Berin Aniesh

Data Engineer

*16/194, Aniesh Nivas, EMS Street, Kankarai, Thiruvattar, Tamil Nadu - 629177, India.*

(+91) 82-4859-2606 | berinaniesh@gmail.com | berinaniesh.xyz | berinaniesh | berinaniesh

## Summary

- 5+ years building and operating production data systems: ETL/ELT pipelines, event streaming, orchestration, warehousing, and ML feature infrastructure on Linux and Kubernetes.
- Deep Python and SQL background with a strong numerical and computational foundation (Monte Carlo simulation, validated statistical analysis).
- Production reliability mindset: monitoring, orchestration, and incident response, maintaining 99.9% uptime SLAs.
- Comfortable across the data stack: PostgreSQL, MySQL, Redis/MongoDB, OLAP stores, Airflow, Kafka, Spark, and cloud (AWS, GCP).

## Work Experience

### Kenfra

*Marthandam, Tamil Nadu*

Data & ML Engineer / Team Lead — *Sep. 2022 - Present*

- Lead data and ML infrastructure for client projects: building ETL/ELT pipelines, feature engineering, and training and inference data paths end to end on self-hosted Linux and Kubernetes.
- Worked directly with clients to define data requirements, schemas, and analytics workflows, translating business needs into pipeline and system design.
- Mentoring junior engineers, reviewing code, and owning delivery timelines and production data quality.

### VerseQuick.com

*Worldwide*

Founder and Lead Engineer — *Sep. 2023 - Present*

- Founded and independently operate an analytics-driven platform serving ∼10,000 daily active users at 100–500 peak requests/sec; a personal venture built alongside full-time employment.
- Instrumented event collection and analytics (Google Analytics, Tag Manager) and built reporting over platform usage, SEO, and performance data.
- Designed a high-concurrency backend (Rust/Actix) with a PostgreSQL and Redis data layer, deployed on Linux behind an Nginx load balancer.
- Automated data and deployment workflows through CI/CD pipelines and scheduled jobs; currently rewriting the stack onto Kubernetes for scalability and isolation.

### Pepcoding Ltd.

*Noida, Uttar Pradesh*

Product Engineer — *Sep. 2021 - Apr. 2022*

- Administered and maintained Linux servers on AWS supporting the nados.io platform, meeting a 99.9% uptime SLA through monitoring, incident response, and routine maintenance.
- Delivered instruction to a cohort of 30 students in Data Structures & Algorithms and Database Management Systems.

## Other Skills

| | |
|---|---|
| **Programming** | Python, SQL, Rust, Go, Java, C#, JavaScript, Dart |
| **Databases** | PostgreSQL, MySQL/MariaDB, Redis, MongoDB, OLAP/Columnar Stores |
| **Machine Learning and AI** | Pytorch, Tensorflow, Feature Pipelines, CNNs, U-Net, GANs, YOLO, Transformers, LLMs |
| **Systems, Cloud and DevOps** | Linux, Bash, Kubernetes, AWS, GCP, Nginx, Docker, Jenkins, ArgoCD, Harbor, WireGuard, CI/CD |
| **Frameworks** | FastAPI, React, SvelteKit, NextJS, Flutter, Node.js |
| **Build & Tooling** | Git, Gradle, Meson, CMake |

## Data Engineering

- ETL/ELT pipelines: designed and maintain pipelines ingesting application, analytics, and ML data into PostgreSQL, object storage, and OLAP stores; automated scheduled refreshes across 30–50 recurring jobs.
- Orchestration: schedule and monitor recurring data processes (ETL, model training, feature refresh, report generation) with failure alerting and retries.
- Streaming and events: capture and process event streams (usage analytics, ad-view events) at ∼5M events/day, aggregating into reporting dashboards.
- Warehousing and OLAP: model schemas and run analytical queries and reports over columnar warehouses, with data quality checks and lineage.
- Distributed compute: process ∼1 TB of batch data per day with Python and Spark for feature engineering and large-scale analytics workloads.
- Feature and ML data pipelines: cleaned, transformed, and versioned datasets feeding model training and inference across computer vision and LLM systems.

(Updated version can be found at https://berinaniesh.xyz/resume-data-engineer.pdf)

## Open Source

### Gentoo Foundation

*Remote*

Google Summer of Code Contributor

*May 2023 - Sep. 2023*

- Selected as one of four contributors worldwide for Google Summer of Code 2023 with the Gentoo Foundation, on the project *Modernization of Portage by refactoring and rewriting performance critical parts as C++ extensions*.
- Contributed 12 pull requests to gentoo/portage (8 during the program): refactored the dependency-graph resolver and CLI data paths, removed dead code, and added type annotations across a large, long-lived Python codebase.
- Worked asynchronously with upstream maintainers through review, benchmarking, and iterative rework on code shipped to Gentoo users worldwide.

## Education

### Pandit Deendayal Energy University

*Gandhinagar, Gujarat*

M.Tech in Nuclear Science and Technology

*Sep. 2019 - Aug. 2021*

- Specialized in neutronics and Monte Carlo statistical simulation; graduated with a GPA of 9.0/10.
- Developed a Monte Carlo particle-transport simulation to estimate heat flux in a CANDU reactor, aggregating millions of sampled particle histories and validating results within 10% of experimental data.
- Built statistical and numerical analysis workflows over large simulation datasets, tying computational models to experimentally measured physics.

### MEPCO Schlenk Engineering College, Anna University

*Sivakasi, Tamil Nadu*

B.E in Mechanical Engineering

*Aug. 2014 - Apr. 2018*

- Focused on computational fluid dynamics (CFD) and numerical simulations; graduated with a GPA of 8.01/10.
- Completed a CFD project on species transport in gasification reactions, identifying optimal equivalence ratios and validating results experimentally; presented at an international conference.
