Berin Aniesh

Senior Software Engineer

16/194, Aniesh Nivas, EMS Street, Kankarai, Thiruvattar, Tamil Nadu - 629177, India.

(+91) 82-4859-2606 | berinaniesh@gmail.com | berinaniesh.xyz | berinaniesh | berinaniesh

Summary

- 5+ years designing and delivering production-grade systems, leading engineering teams and owning architecture, delivery, and reliability end to end.
- Technical lead on 15+ shipped projects, from system design and data/ML pipelines to Kubernetes-based deployment and long-term operations.
- Full-stack and infrastructure depth: Rust, Go, and Python backends, React and SvelteKit frontends, Kubernetes, AWS, GCP, and CI/CD for systems serving 100+ requests/sec and 10K+ daily active users.
- Own production reliability and incident response, maintaining 99.9%+ uptime SLAs across platforms.

Work Experience

Kenfra

Marthandam, Tamil Nadu

Software Engineer / Team Lead — *Sep. 2022 - Present*

- Leading a team of 5–8 engineers across ML and application projects, mentoring junior engineers, driving code review culture, and owning system design and delivery timelines.
- Designed, built, and deployed production-grade computer vision and AI systems (YOLO, U-Net, GANs, LLM-backed services), owning the full lifecycle from data pipelines and model training to self-hosted Linux and Kubernetes environments.
- Owned end-to-end architecture decisions for client systems, from data ingestion and serving stacks to observability, translating business requirements into technical design with clients.
- Operated production ML and application systems including monitoring, alerting, on-call incident response, and SLA upkeep.

VerseQuick.com

Worldwide

Founder and Lead Engineer — *Sep. 2023 - Present*

- Founded and independently built a production grade, fullstack platform now serving ∼10,000 daily active users at 100–500 peak requests/sec. It is a personal venture run alongside full-time employment.
- Designed and implemented a high-throughput backend with Rust and Actix Web, benchmarked and optimized for concurrency at a p95 latency of under 200ms.
- Architected Linux infrastructure for frontend, backend, and databases behind an Nginx reverse proxy and load balancer, with automated testing and deployment through CI/CD pipelines.
- Implemented analytics, SEO, and performance tooling (Google Analytics, Tag Manager). The platform is indexed by Google and serves users worldwide.
- Currently leading a major architectural rewrite using Next.js, Bun.js, Go, and Rust, with services deployed on Kubernetes to improve scalability, isolation, and long term maintainability (deployed here).

Colris Inc.

Tamil Nadu, India

Founding Engineer — *Sep. 2022 - Present*

- Part of the founding engineering team of Colris Inc., a DOOH (digital out-of-home) advertising business in India, currently serving three screens across Nagercoil, Coimbatore, and Tirunelveli.
- Built the Go booking backend and deployed it on AWS, running the end-to-end ad-slot booking flow in production.
- Built a PyTorch and OpenCV view-count analytics system that ingests camera video feeds from live screens to measure on-screen ad views, including small-scale data analysis across all three screens.

Pepcoding Ltd.

Noida, Uttar Pradesh

Product Engineer — *Sep. 2021 - Apr. 2022*

- Owned 24/7 on-call for Linux servers on AWS supporting the nados.io platform, meeting a 99.9% uptime SLA through monitoring, incident response, and routine maintenance.
- Delivered instruction to a cohort of 30 students in Data Structures & Algorithms and Database Management Systems, combining theory with hands on problem solving.

Skills

Programming	Python, Rust, Go, Java, C#, JavaScript, Dart, SQL
Frameworks	React, NextJS, SvelteKit, Tailwind CSS, FastAPI, Flutter, Node.js
Systems, Cloud and DevOps	Linux, Bash, Kubernetes, AWS, GCP, Nginx, Docker, Jenkins, ArgoCD, Harbor, WireGuard
Machine Learning and AI	Pytorch, Tensorflow, CNNs, U-Net (Example), GANs (Example), YOLO, Transformers, LLMs
Databases	PostgreSQL, MySQL/MariaDB, Redis, MongoDB
Data Engineering	ETL/ELT Pipelines, Airflow, Kafka, Spark, dbt, BigQuery, Data Warehousing, Data Modeling
Build & Tooling	Git, Gradle, Meson, CMake, System Design, Microservices

(Updated version can be found at https://berinaniesh.xyz/resume-with-colris.pdf)

Open Source

Gentoo Foundation

Remote

Google Summer of Code Contributor

May 2023 - Sep. 2023

- Selected as one of four contributors worldwide for Google Summer of Code 2023 with the Gentoo Foundation, on the project *Modernization of Portage by refactoring and rewriting performance critical parts as C++ extensions*.
- Contributed 12 pull requests to gentoo/portage (8 during the program), covering type annotations and docstrings, dead-code and duplication removal, and refactoring of the dependency-graph resolver, emerge CLI actions, and test runner.
- Worked directly with upstream Gentoo developers through full review cycles on a long-lived production codebase, from design discussion and benchmarking to rework and merge.

Education

Pandit Deendayal Energy University

Gandhinagar, Gujarat

M.Tech in Nuclear Science and Technology

Sep. 2019 - Aug. 2021

- Specialized in neutronics and Monte Carlo statistical simulation; graduated with a GPA of 9.0/10.
- Developed a Monte Carlo particle-transport simulation to estimate heat flux in a CANDU reactor, aggregating millions of sampled particle histories and validating results within 10% of experimental data.
- Built statistical and numerical analysis workflows over large simulation datasets, tying computational models to experimentally measured physics.

MEPCO Schlenk Engineering College, Anna University

Sivakasi, Tamil Nadu

B.E in Mechanical Engineering

Aug. 2014 - Apr. 2018

- Focused on computational fluid dynamics (CFD) and numerical simulations; graduated with a GPA of 8.01/10.
- Completed a CFD project on species transport in gasification reactions, identifying optimal equivalence ratios and validating results experimentally; presented at an international conference.
